Rebranding

In 2021 we decided to streamline the branding of the company, as well as return to the roots and change its name to ARMBROK—the original name, under which our company was established back in 1994. It feels natural and inspiring to embrace the company's original legacy as we take a retrospective look at almost three decades of successful market presence and good reputation.

Glass

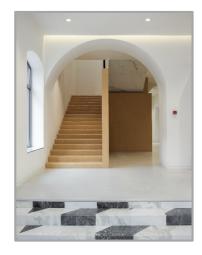

Fabric Plastic

New Premises

Updated name and image call for improved locations and—most importantly!—a more convenient environment to welcome customers. So ARMBROK moved to a new address with larger, brighter and smarter offices, in the very heart of the Armenian capital and its vibrant financial district. The spacious office brought together the staff of ARMBROK and our subsidiary/partnering companies, which enabled us to provide the clients with integrated services under one roof.

Macroeconomic Update 2021

Economic Performance

The Armenian economy closed the year with a 5.7% real growth of the GDP, which amounted to USD 13.9B. The highest growth rate, 61.7%, was reported for the sector of accommodation and services. Public health and social security, transportation, and warehousing went up remarkably, as well – by 31.8% and 27.4%, respectively. A significant increase of 14.1% was achieved in real estate activities. A minor decline of 1.4% was reported for agriculture; financial and insurance services also slightly contracted, by 0.8%. The public administration sector declined by 9.9%. As to the aggregate sectors of Armenian economy, in 2021 trade and services went up by 6.8%, while industry and construction grew by 4.2% and 2.6%, respectively.

During the year, a sharp increase was achieved in foreign trade. The total volume of external turnover expanded by impressive 17.7% standing at USD 8.4B. Exports went up by 19.1% to USD 3.0B, while imports rose by 16.9% to USD 5.4B. As a consequence, foreign trade deficit widened by USD 290M, or 14.2%, equalling to USD 2.3B.

Inflation and Exchange Rates

As an integral part of the global economy, Armenia could not evade the effects of the worldwide inflation surge recorded in 2021. Throughout the year the Armenian economy remained under serious inflation pressure predominantly attributed to the developments in the foreign markets after the gradual removal of COVID-19 related restrictions.

Under these circumstances, committed to preventing further acceleration of inflation and anchoring inflationary expectations, the Central Bank of Armenia (CBA), one of the first, started to implement restrictive monetary policy. By the year-end, through several increases in the refinancing rate, it was brought to 7.75% from the 5.25% at the beginning of the year. The CBA continued with the same policy in 2022, as well, especially in the light of Russia-Ukraine conflict. As a result, the rate was further increased to the 9.25% as of the time of writing this report.

Overall, monetary authorities managed to sustain macroeconomic stability of the economy and finish the year with a 7.2% inflation—still among the lowest in the region (Georgia - 9.6%, Turkey - 19.6%, Iran - 43.4%).

Concerning the national currency, despite a hike in the beginning of the year when USD/AMD exchange rate nearly reached AMD 540, it remained stable during the year with no need of any essential interventions from the CBA. As of the end of the year the official exchange rate of AMD against USD and EUR stood at AMD 480.14 and AMD 542.61. Compared to the year-end 2020, AMD appreciated against both currencies, by 8.12% and 15.36% respectively.

As of the end of the year, due to uncertainties and fluctuations in the financial markets, the yield of 10-year Government bonds went up by 1.18pps over that of the same period last year, to 10.02%.

Macroeconomic Update 2021

Subsequent events

On February 24, the military conflict between Russia and Ukraine started. USA, EU, and several other countries joined in condemning the actions of Russia and imposed massive economic and political sanctions against the country, its officials and companies. A great many international companies and brands pulled out from the Russian market cutting thousands of local jobs. As a consequence, the Russian economy is expected to decline in 2022 and 2023. The newly imposed sanctions brought about global economic problems, as well—due to uncertainties, increased energy prices, interrupted supply chains. Obviously, these problems will take a toll on the Armenian economy, especially taking into account its substantial integration and interactions with Russia.

On the other hand, the situation has opened some new opportunities for Armenia: the country has already hosted nearly 100,000 Russian citizens and lots of private businesses, especially from IT sector—including due to its favourable business and tax environment. This means additional inflow of money and positive impact on business activity, which will in turn benefit the macroeconomic environment.

According to the official statistics for the H1 2022, the Armenian economy demonstrates remarkable performance with double-digit growth rate - 11.8% y/y. All major sectors of the economy have positive growth rates (except for agriculture), with services having the highest increase rate - 26.9% y/y.

Despite above-target inflation (CPI for January-June went up by 8.1% y/y), the overall macroeconomic stability was sustained. Due to currency inflows and accelerated economic activity, the Armenian Dram strongly appreciated against both USD and EUR, standing at AMD 407.21 and AMD 423.54, respectively.

Operational Results 2021

Profitability

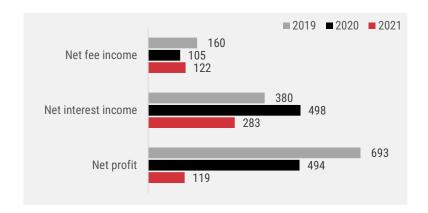

Assets & Capital

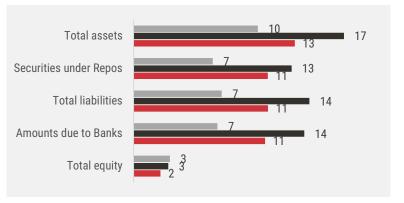

Armbrok closed the financial year of 2021 with a net income of AMD 119.2M—a contraction of 75.89% over the previous year. The decline primarily came from an increase in interest expenses by 54.15% y/y, which brought about a decrease of net interest income by 43.1% y/y to AMD 282.9M. Due to the high volatility in the financial market the company also reported a net loss of AMD 137.6M from the trade of financial assets at fair value through OCI.

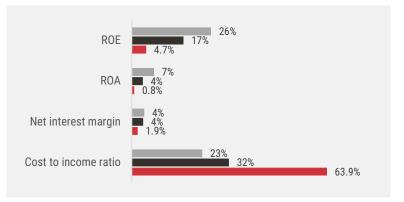

On the other hand, Armbrok increased its net fee and commission income by 16.7% y/y to AMD 122.0M.

During the year, total assets of Armbrok went down by 23.4% y/y to AMD 13.3B. Total liabilities contracted by 23.6% y/y to AMD 11.1B, while total equity reduced by 22.3% y/y standing at AMD 2.2B. As a consequence of the comparable decline rates, financial leverage ratio remained nearly unchanged at 6.1x vs 6.0x in 2020. Government bonds increased their share in total investment portfolio to 88.2%. However, total portfolio of Government bonds contracted by 16.4% y/y to AMD 11.3B. The share of corporate bonds dropped to 6.1%. Repo portfolio of the company declined, as well – by 19.4% y/y to AMD 10.8B.

Due to the lagging financial performance, there was a decline in key financial ratios, as well: ROE contracted by 12.2pps y/y to 4.7%, while ROA decreased by 2.8pps y/y to 0.8%. Cost to income doubled, equalling to 63.9%. As a result of the increasing borrowing rates in the market, in 2021 net interest margin narrowed to 1.9% (vs 3.7% in 2020).
