Profitability

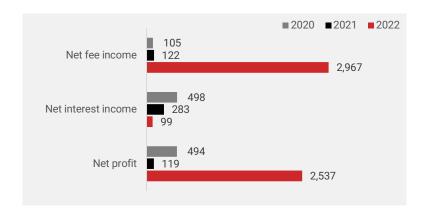

Assets & Capital

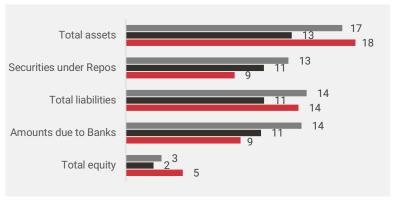

Key Ratios

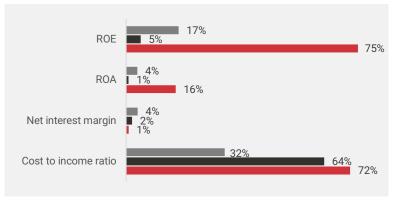

In 2022, Armbrok demonstrated an exceptional financial performance: net profit skyrocketed 21.28x y/y to AMD 2,537.2M. Net fee & commission income and net trading income were the main drivers of the improvement. In particular, the net fee & commission income increased 24.31x y/y standing at AMD 2,967.2M. The growth of net trading income was even more impressive: +83.79x y/y to AMD 8,150.6M. Net income, on the contrary, reduced by 65.0% y/y to AMD 99.1M.

Armbrok reported an impressive 39.5% y/y growth of total assets to AMD 18.4B during the year. Total liabilities increased by remarkable 24.9% y/y to AMD 13.8B. Total equity more than doubled reaching AMD 4.6B. The relatively faster growth of the total equity resulted in a decline of the financial leverage ratio to 4.0x from 5.9x in 2021. Despite a 13.7% y/y contraction, Government bonds remained the largest component of Armbrok's portfolio with AMD 9.8B. However, their share in the total portfolio decreased by 32.4pps y/y to 55.8%. Cash & cash equivalents were the second largest component with a respective share of 26.3% and value of AMD 4.6B. The Company also reported a contraction of repo portfolio by 23.1% y/y to AMD 8.3B.

Armbrok's outstanding financial performance is best reflected in the significant improvement of its key profitability ratios. Particularly, ROA increased by 15.2pps y/y to 16.0%, and ROE, by 70.1pps y/y to 74.8%. Cost to income ratio went up by 8.4pps y/y to 72.3%. Conversely, net interest margin narrowed by 1.1pps to 0.8%, due to higher borrowing rates in the financial market.

Armbrok in 2022: increased capacity, remarkable success

#### Implementing strategies to keep up with market dynamics

With the rapidly changing environment triggered by the developments in the broader region, Armbrok worked to implement its chosen strategy: evolving effectively to handle the increased demand for quality services. Achieving this goal required a combination of well-defined efforts including innovation, skill building, attraction of new talent, service differentiation, and partner network expansion.

Within a short time, frame, Armbrok nearly doubled the number of employees engaging highly qualified industry experts in various areas, designed new asset management strategies, established cooperation with international institutions and global banks. The newly found expertise and collaborations allowed Armbrok to tap into global markets and offer international trading services with worldwide settlement systems—in addition to trading in Armenian securities. Asset management clients were offered highly-performing individual and pooled products. The scope of advisory services was enhanced to meet the requirements of new, mostly foreign, clients. Customer service and account management systems were expanded and streamlined. The company has also fully updated its internal regulatory environment to match the international sanctions framework.

#### A record of success

The truly extraordinary outcome accomplished by these initiatives translated directly into Armbrok's financial results: compared to 2021, total assets increased by nearly 40%, while total equity doubled, significantly reducing the leverage ratio. Income diversification by core business areas improved substantially ensuring a more balanced revenue stream. All this, as well as the overwhelming 21-fold increase in net profit and a ROE of 74.8% rendered the company more reliable, efficient, and competitive than ever.

#### Keeping the lead

Armbrok remains the market leader among the Armenian non-bank financial institutions and is currently the largest investment company in Armenia by capital, assets, staff, experience and infrastructure. Like in previous years, the company received several winning awards from the Armenia Securities Exchange and the Central Depository of Armenia, including as the Best Exchange member in repo/swap transactions and the Best Member in the Unified system of securities registration and settlement.

# 3

#### **Economic Performance**

After the start of the Russia-Ukraine military conflict and the subsequent imposition of massive sanctions on the Russian economy, international financial institutions were forecasting rather a modest economic growth for Armenia, taking into account its strong and deep economic ties with Russia. Instead, the Armenian economy has experienced a large inflow of high-skilled human resources and relocated businesses that contributed significantly to the expansion of the country's business activity. As result, contrary to the pessimistic expectations, the Armenian economy demonstrated an impressive performance throughout the whole 2022, closing the year with a 12.6% economic growth. Moreover, the national GDP reached a record-high level of USD 19.5B.

Services were the dominant driving force of the national economy with an impressive y/y upsurge of 28.2%. Double-digit growth rates were achieved in construction and trade, as well – 18.8% y/y and 16.8% y/y, respectively. The industrial output increased by 6.0% y/y. However, the agriculture contracted by 0.7% y/y. As for subsectors, the fastest growth was achieved in ICT – 50.6%. Financial and insurance services were close second with 46.8% growth rate. The top-three was completed by accommodation services – 42.2%.

In 2022, the foreign trade of Armenia expanded by a remarkable 68.6% y/y reaching USD 14,129M – again, a historic-high level. Exports went up by 77.7% y/y to USD 5,360M, while imports surged by 63.5% y/y to USD 8,769M. As a consequence, the trade deficit widened by USD 1,062M standing at USD 3,409M. A 15.5% y/y rise was reported for average monthly nominal wages, which amounted to AMD 235,576 (USD 540).

#### Inflation and Exchange Rates

Similarly, to the global economy, during the year the Armenian economy was subject to serious inflation pressure due to increased uncertainties caused by the ongoing conflict. Therefore, the preservation of macroeconomic stability was the primary economic challenge for the government and regulatory authorities. As a response the Central Bank of Armenia continued the implementation of its restrictive monetary policy aimed at the reduction of money supply through several refinancing rate hikes. Thus, by the end of 2022, the rate increased to 10.75% from 7.75% at the beginning of the year.

Ultimately, such a policy turned to be efficient, translating into an 8.6% inflation – among the lowest in the region.

Migrant and currency inflow resulted in an increased demand for the Armenian dram. As a result, the AMD appreciated against both USD and EUR, standing at AMD 393.57 and AMD 420.06. The respective appreciation rates were 18.0% and 22.6%. It is worth mentioning, that the AMD was the top performer in the world, with respect to appreciation against USD. During the year, the Central Bank of Armenia purchased USD 573.8M.

The economic uncertainties also affected the financial markets by bringing about increased volatility: yields on 10-year AMD-denominated Government bonds increased by 1.97pps to 11.99%.

# Macroeconomic update: Outlook for 2023

The Armenian economy continued its impressive performance in the beginning of 2023, as well. Particularly, in the first quarter of the year a 12.1% y/y growth of GDP was reported. Again, double-digit rates were achieved for services, trade and construction – 22.9% y/y, 19.6% y/y and 15.2% y/y, driving the economy: +23.2% y/y, +22.2% y/y and +16.8% y/y, respectively. ICT remained the leader in terms of the growth pace: +60.5% y/y. A remarkable expansion of the tourism sector was also reported. The total number of tourist arrivals went up by 81.2% y/y to 451,850, surpassing the pre-pandemic figures. More positive changes are expected for the remaining part of the year, given the increasing activity of local and foreign air carriers, especially low-cost airlines and the improving air connectivity of the country.

Foreign trade volume nearly doubled during the first 4 months of the year, amounting to USD 5.8B. Exports increased 2.1x y/y standing at USD 2.2B, while imports went up by 93.9% y/y rounding to USD 3.6B.

Another positive sign for Armenia is the stabilizing inflation with a declining pattern. In March, the CPI dropped to 5.4% y/y from 8.1% y/y in February. Another decline to 3.2% y/y was reported for April, and the trend eventually resulted in a 0.5 y/y deflation in June 2023. The CBA reacted by switching to a less restrictive monetary policy and made a 0.25pps cut of the refinancing rate to 10.5%. With the existing deflation pressure, more cuts may be expected.

Armenia has also managed to improve its investment attractiveness—including by achieving better sovereign credit ratings. All three major rating agencies—Moody's, Fitch and S&P—have upgraded outlooks of Armenia, from negative to stable (Moody's), and from stable to positive (Fitch and S&P).

The country has also significantly increased its gross international reserves, which is also a remarkable indicator of the overall macroeconomic strength and stability. As of the end of 2022, they grew by 27.3% y/y standing at USD 4.1B. Armenia has also been steadily improving its debt burden: during the year, the debt/GDP ratio dropped by 12.0pps to 54.5%. Thanks to the sustained level of impressive economic growth, more improvement is foreseen for 2023.
